

Name: Kevin Rojas-Torres

Date: November 11, 2025

DEADLINE: Tuesday 11th 10:59 AM

✖ 1. Verify if a number is positive, negative, or zero

Ask (or set) a number and print:

“Positive” if it’s greater than 0

“Negative” if it’s less than 0

“Zero” if it equals 0

```
let var_number = 0;
if (var_number > 0) {
    console.log("Positive");
} else if (var_number < 0) {
    console.log("Negative");
} else {
    console.log("Zero");
};
```

✖ 2. Return the name of the day

Given a number from 1 to 7, print the name of the day.

(1 = Monday, 7 = Sunday)

```
let day = 3;

if (day === 1) {
    console.log("Monday");
}

else if (day === 2) {
    console.log("Tuesday");
}

else if (day === 3) {
    console.log("Wednesday");
}

else if (day === 4) {
    console.log("Thursday");
}
```

```

else if (day === 5) {
    console.log("Friday");
}

else if (day === 6) {
    console.log("Saturday");
}

else if (day === 7) {
    console.log("Sunday");
}

else {
    console.log("Invalid Day, choose between 1-7.")
};

```

✖ 3. Sum numbers from 1 to 100

Use a **for** loop to calculate the total sum of numbers from 1 to 100.
Print the result at the end.

```

let count = 0;
for (i = 1; i <= 100; i++) {
    count += i;
};

console.log(`${count}`);

```

✖ 4. Ask for a number until it's greater than 50

Create a **while** loop that keeps asking the user (or simulating input) to enter a number.
Stop when the number is greater than 50 and print a confirmation message.

```

let user_input = 0;

while (user_input < 51) {
    user_input = prompt("Enter a number: ")
};

console.log(`The number (${user_input}) is greater than 50.`);

```

✖ 5. Check if a number is even or odd

Ask (or set) a number and print:

- “Even” if it’s divisible by
- “Odd” otherwise

```
let even_or_odd = 5;

if (even_or_odd % 2 === 0) {

    console.log("Even");

}

else {

    console.log("Odd");

};
```

✖ 6. Multiplication table

Ask (or set) a number between 1 and 10, and print its multiplication table up to 10.

```
let mul_number = null;
let chosen_number = 11;

if (chosen_number >= 1 && chosen_number <= 10) {
    for (i = 1; i < 11; i++) {
        mul_number = chosen_number;
        mul_number *= i;
        console.log(`${mul_number}`);
    };
}
else {
    console.log("Invalid number, enter a number between 1-10.");
};
```

✖ 7. Count down from 10 to 1

Use a loop to print numbers from 10 down to 1.

When the count ends, print “Done!”.

```
for (i = 10; i >= 1; i--) {  
    console.log(`${i}`);  
};  
console.log("Done!");
```

✖ 8. Simple grading system

Given a score from 0 to 100, print the grade according to the following:

- 90–100 → “A”
- 80–89 → “B”
- 70–79 → “C”
- 60–69 → “D”
- Below 60 → “F”

```
let score = prompt("Enter your grade score: ");  
  
if (score >= 90 && score <= 100) {  
    console.log("A");  
}  
else if (score >= 80 && score <= 89) {  
    console.log("B");  
}  
else if (score >= 70 && score <= 79) {  
    console.log("C");  
}  
else if (score >= 60 && score <= 69) {  
    console.log("D");  
}  
else if (score < 60) {  
    console.log("F");  
}  
else {  
    console.log("Invalid input, give a score between 0-100.");  
}
```
